## ***REASONS FOR ALLOWANCE***

### ***Allowable Subject Matter***

1. Claims 1-24 are allowed.

The following is an examiner's statement of reasons for allowance: because the prior art does not teach or fairly suggest an RF amplifier used in a radio communication device, comprising: means for applying an initial control to a control input of the amplifier, the initial control signal an estimate of a signal level required at the control input of the amplifier to provide a particular output when the vector modulator output is at full output; an integral control circuit having a control signal output coupled to the control input of the amplifier, the integral control input of the amplifier having a reference input coupled to a second reference signal source; and an output of the amplifier coupled to an input of the integral control circuit; means for ramping the output of the vector modulator after applying the initial control signal to the amplifier; means for correcting the initial control signal applied to the control input of the amplifier during ramping; and means for controlling a transient out-of-band power spectrum during ramping.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wilson et al (U.S. Pat. 5,287,555) disclose a power control circuitry for a TDMA frequency transmitter.

Makikallio et al (U.S. Pat. 5,697,074) disclose a dual rate power control loop for a transmitter.

Proctor, Jr. (U.S. Pat. 6,078,216) discloses a digital signal processor-resident RF power amplifier.

Camp, Jr. et al (U.S. Pat. 6,295,442) disclose an RF amplifier for a transmitter.
